

Injection mortar FIS EM

The high-performance mortar for concrete.

OVERVIEW

Injection mortar
FIS EM 390 S

Injection mortar
FIS EM 1100 S

Static mixer
FIS SE

Suitable for:

- Non-cracked concrete
- Reinforcement bars

For fixing of:

- Steel constructions
- Consoles
- Machines
- Staircases
- High-racks
- Wooden constructions
- Reinforcement bars

DESCRIPTION

- Best performance mortar in the shuttle cartridge based on epoxy resin.
- Optimum solution for concrete (anchor rods and reinforcement bars).
- Resin and hardener are stored in two separate chambers and are not mixed and activated until pushed through the static mixer.
- Partially used cartridges can easily be reused by changing the static mixer.

Advantages/Benefits

- Very good bonding of the mortar ensures highest loads in concrete.
- Suitable for underwater installations.
- Suitable for diamond drilled holes.
- Expansion-free anchoring allows low axial spacings and edge distances.
- Ergonomic application guns for quick and easy installation.

Accessories/Recommended loads

- For fixing in concrete, see page 81 et seq.
- Appropriate application guns, see page 111/112

TECHNICAL DATA

Injection mortar
FIS EM 390 S

Static mixer **FIS SE**

Injection mortar
FIS EM 390 S HWK

| Type | Art.-No. | ID | languages on the label | contents | Qty. per box |
|------------------|--------------|----|----------------------------------|---------------------------------------|--------------|
| FIS EM 390 S HWK | 40038 | 8 | D, GB, F, I, NL, E | 20 cartridge 390 ml + 40 static mixer | 1 |
| FIS EM 390 S | 93048 | 9 | D, GB, F, I, NL, E | 1 cartridge 390 ml + 2 static mixer | 6 |
| FIS EM 390 S | 93049 | 6 | GB, PRC, JP, ROK, CZ, PL | 1 cartridge 390 ml + 2 static mixer | 6 |
| FIS EM 1100 S | 96865 | 9 | D, NL, GB, F, U, E, PRC, JP, ROK | 1 cartridge 1100 ml + 2 static mixer | 6 |
| FIS SE | 96448 | 4 | - | 1 static mixer | 10 |

FIXING PRINCIPLES

In detail: The general principles for installation, the correct drilling procedure and much more on page 26.

CURING TIME

Gelling and curing time of fischer FIS EM

| Cartridge temperature (mortar) | Gelling time | temperature at anchoring base | Curing time |
|-----------------------------------|--------------|----------------------------------|-------------|
| - 5°C - + 5°C | 4 hrs. | - 5°C - + 5°C | 80 hrs. |
| + 5°C - + 10°C | 2 hrs. | + 5°C - + 10°C | 40 hrs. |
| + 10°C - + 20°C | 30 min. | + 10°C - + 20°C | 18 hrs. |
| + 20°C - + 30°C | 14 min. | + 20°C - + 30°C | 10 hrs. |
| + 30°C - + 40°C | 7 min. | + 30°C - + 40°C | 5 hrs. |

The above times apply from the moment of contact between resin and hardener in the static mixer.

For installation, the cartridge temperature must be at least +5°C. With temperatures above +30°C to +40°C the cartridges have to be cooled down to +15°C or +20°C. For longer installation times, i.e. when interruptions occur in work, the mixer should be replaced.

LOADS

Mean ultimate loads, design resistant and recommended loads for single anchors of fischer Injection system FIS EM used with fischer threaded rods with large spacing and edge distance.

| | h_{min} [mm] | $h_{ef,max}$ | | | | | | | | | | | | | | | | | | 272 | | | |
| Clearance-hole in fixture to be attached for pre-positioned installation | $d_f \leq$ [mm] | | | | | | | | | | | | | | | | | | | 18 | | | |
| Clearance-hole in fixture to be attached for push-trough installation | $d_f \leq$ [mm] | | | | | | | | | | | | | | | | | | | 20 | | | |
| Required torque | T_{inst} [Nm] | | | | | | | | | | | | | | | | | | | 60 | | | |
| Required mortar volume | [Scale units] | $h_{ef,min}$ | | | | | | | | | | | | | | | | | | 4 | | | |
| FIS EM | [Scale units] | $h_{ef,max}$ | | | | | | | | | | | | | | | | | | 14 | | | |

* Steel failure decisive.

¹⁾ For minimum axial spacing and minimum edge distance the above described loads have to be reduced (See "fischer Technical Handbook" or design software "CC-COMPUFIX")!

Values given above are valid under the following assumptions:

- Sufficient mechanical cleaning of the drill hole using stainless steel brushes.
- Dry concrete, temperature range from - 40 ° up to + 43 °C .

Continued next page.

All values apply for concrete C20/25 without edge or spacing influences. Design resistant loads: Recommended loads: material safety factor γ_M is included. Material safety factor γ_M depends on the type of anchor. material safety factor γ_M and safety factor for load $\gamma_L = 1.4$ are included.
